## PROFILE

Passionate and self-taught Front-End Developer residing in Melbourne Australia. Specializing in HTML, CSS, JavaScript and React. Skilled in creating responsive and interactive, user-friendly websites and applications through clean and efficient code. Aiming to continue learning, growing and gain experience in the world of technology.

## EXPERIENCE

QUICKSITEGURU - (STARTUP) - 2024 - CURRENT

- Developing templates using HTML, CSS, and JavaScript with Responsive Design.
- Insight and Experience in the startup eco-system, from innovation to execution.
- Learning from technical experts to enhance technical and professional skills.

## PROJECTS

FILMANIA - REACT APP | 2023

LINK - FILMANIA-HY.NETLIFY.APP/

This website fetches data from the TMDB API to display the latest Movies and TV Shows onto the browser with both also having their respective route pages. Clicking on individual movies or tv shows also takes the user to a separate page which displays specific information about that movie or tv show with the option to watch related videos and the trailer.

E-COMMERCE WEBSITE - REACT APP | 2023

LINK - ECOMMERCE-HY.NETLIFY.APP

The Aim of this website was to create an e-commerce store that allowed the user to select and add products to a cart, where products can be incremented or decremented and the price would be calculated for a total sum. Each product takes the user to a unique page with a description. Users can also browse the different products using the category tabs in the categories page.

TRAVELSPOT - REACT APP | 2023

LINK - nrdymx.csb.app/

The aim of this website was to practice basic HTML and CSS Design, as well as React Router DOM through creating different route pages as well as creating working carousels. Data files have been manually created, which are then retrieved using a get function that passes endpoints to simulate the fetching of third-party data. This data is then mapped to be displayed onto the page.

## SKILLS

- HTML, CSS, JavaScript, React.Js
- Tailwind CSS and TypeScript
- Responsive Design
- Git and GitHub
- Debugging and Producing Efficient Code.
- Able to work under Pressure
- Great Organisation and Time Management
- Fluent in English and Cantonese
